

Composting

Composting hints

- ★ Cut things into small bits before you put them in. They will break down faster.
- ★ Add soil or potting mix. This will get germs in to break things down.
- ★ If you don't have a compost bin you can make a compost heap. Cover it up with hessian or a plastic sheet.
- ★ Put your compost bin in shade. Too much sun will dry it out.
- ★ Compost mixture should be kept damp, not soaking.
- ★ Mix, or turn, your compost once a week.
- ★ Start your compost with a layer of larger brown waste. Then layer with green waste, brown waste, and then water it. Repeat this.
